STATISTICAL ABSTRACT
1956/7

INDEX

	TABLE NO.	PAGE
INTRODUCTORY NOTES		
LAND AND CLIMATE		
Area of Kenya Colony and Protectorate	1	1
Area of provinces and districts	2	1
Lakes, mountains and national parks	3	1
Land classification	4	2
Rainfall: Main stations, 1956, compared with the average	5	2
Temperature: Main stations, 1956, compared with the average	6	5
Relative humidity: Main stations, 1956, compared with the average	7	5
Sunshine: Main stations, 1956, compared with the average	8	6
CONSTITUTION		
Legislative Council: Composition	9	8
Legislative Council: Analysis of membership (March, 1957)	10	8
POPULATION AND VITAL STATISTICS		
Population		
Population in census years	11	10
Civil population estimates, 1946-56 (de facto population as at mid-year by race)	12	10
Population Census, 1948 □		
Civil population by sex, age, nationality, religion, industry and occupation	□ 3	11
Population of main townships	14	12
Population density by province, district and race	15(a)	15
Distribution of population of districts by density per square mile	15(b)	16
Main tribes	16	16
Main tribes by district	17	17
Non-African Population: Average number of live births per woman ever married	18	18
African Population: Average number of live births per woman	□ 9	18
Vital Statistics		
Births registered	20	18
Deaths registered	21	19
Nairobi: live births notified (residents)	22	19
Nairobi: deaths notified (residents)	23	19
MIGRATION		
Total reported immigration	24	21
Total reported emigration	25	21
Total reported immigration: Analysis by method of entry and race	26	21
Reported new permanent immigration	27	22
Reported change of status: Visitors who are accepted as new permanent immigrants	28	22
Reported permanent emigration	29	22
Excess of new permanent immigrants over permanent emigrants	30	23
Total new permanent immigration, of all types 1956: Analysis by race, sex and age groups	31	23
Total new permanent immigration, of all types 1956: Analysis by race, sex and main occupation	32	23
Reported permanent emigration, 1956: Analysis by race, sex and main occupation	33	25
Total new permanent immigration and permanent emigration: Analysis of European aliens by nationality	34	25
Visitors and persons in transit: Analysis by race and reason for visit	35	26
Visitors and persons in transit: Analysis of Europeans by reported nationality	36	26
Visitors and persons in transit leaving Kenya during 1956: Analysis by race and length of stay in East Africa	37	26
EXTERNAL AND INTERTERRITORIAL TRADE		
External Trade		
Volume and visible balance of external trade	38	29
Domestic exports: Principal commodities by quantity and value	39	29
Domestic exports: Principal commodities by percentage of total value	40	30
Net imports: Total value by S.I.T.C. sections	41	30
Retained imports (i.e. net imports—re-exports): Total value by S.I.T.C. sections	42	30
Retained imports (i.e. net imports—re-exports): Percentage distribution by S.I.T.C. sections	43	31
Domestic exports: Value by principal countries of destination	44	31
Net imports: Value by principal countries of origin	45	32

	TABLE NO.	PAGE
EXTERNAL AND INTERTERRITORIAL TRADE—(Contd.)		
Domestic exports and re-exports: Value by currency group	46	35
Domestic exports and re-exports: Value by sterling and non-sterling areas	47	35
Net imports: Value by currency group	48	35
Net imports: Value by sterling and non-sterling areas	49	36
Domestic exports: Value of principal commodities by principal countries of destination, 1955 and 1956	50(a) and (b)	36
Net imports: Value of S.I.T.C. sections by principal countries of origin, 1955 and 1956	51(a) and (b)	37
Net imports: Principal articles by quantity and value, 1955-1956	52	38
Classification by stage of production and use: Retained imports	53(a-c)	39
Kenya territorial exports index: Selected commodities	54	40
Kenya territorial exports index: All selected commodities combined	55	40
East African exports index: All selected commodities combined	56	40
East African imports index: Selected articles	57	40
Interterritorial Trade		
Local produce and manufactures: Principal commodities exported to Tanganyika	58	41
Local produce and manufactures: Principal commodities exported to Uganda	59	41
Local produce and manufactures: Principal commodities imported from Tanganyika	60	41
Local produce and manufactures: Principal commodities imported from Uganda	61	42
Summary of trade in local produce and manufactures: East African territories, 1955 and 1956	62(a) and (b)	42
TRANSPORT AND COMMUNICATIONS		
East African Railways and Harbours Administration		
Railways East Africa: Mileage of lines open for traffic	63	44
E.A. Railways & Harbours: Revenue	64	44
E.A. Railways & Harbours: Expenditure	65	44
Rail, road and water transport: Passenger, livestock and goods traffic (East Africa)	66	47
Traffic dealt with at main stations, Kenya	67	48
Railway locomotives, rolling stock and track materials: Retained imports, Kenya	68	49
Railway locomotives, rolling stock and track materials: Retained imports, total East Africa	69	49
Stocks of transport equipment held by East African Railways and Harbours (East Africa)	70	49
Shipping		
Kenya ports: Number of vessels entered	71	50
Kenya ports: Net registered tonnage entered	72	50
Kenya ports: Number of vessels entered by nationality and type of trade	73	51
Passenger and cargo handled at Mombasa	74	52
Air Traffic		
Kenya main airfields by type: As at June, 1956	75	52
Progress: East African Airways Corporation (East Africa)	76	53
Commercial aircraft movements: Passengers and freight handled at main airports	77	53
Movements of passengers and freight by commercial aircraft: Arrivals by country of origin	78	54
Movements of passengers and freight by commercial aircraft: Departures by country of destination	79	54
Roads and Motor Vehicles		
Mileage of classified roads: As at 30th June, 1956	80	56
Licensed motor vehicles	81	57
Motor vehicles: New registration	82	58
Motor vehicles: New registration by centres	83	58
Road transport equipment: Retained imports—quantity	84	59
Road transport equipment: Retained imports—value	85	59
Motorcars: Net imports by country of origin	86	59
Buses, trucks, lorries and other motor vehicles: Net imports by country of origin	87	60
Traffic accidents	88	59
East African Posts and Telecommunications Administration		
Income and expenditure (East Africa)	89	61
Articles handled by post offices: Kenya	90	61
Telephone and international telegraph services: Traffic handled—Kenya	91	61
Money orders issued: East Africa	92	62
Money orders paid: East Africa	93	62
AGRICULTURE		
Land utilization-non-African farms	94	64
Acreages under principal crops—non-African farms	95	64
Production of crops—non-African farms	96	64
Price of producers for principal crops	97	65
Livestock numbers-non-African farms	98	65
Livestock purchased for slaughter	99	65

	Table No.	Page
AGRICULTURE—(Contd.)		
Price to producers for first or "A" grade meat	100	66
Dairy produce	101	66
Exports of agricultural produce (mainly non-African)	102	69
Exports of agricultural produce (mainly or partly African)	103	69
Exports of livestock produce	104	70
Main agricultural products of trade with Uganda	105(a)	70
Main agricultural products of trade with Tanganyika	105(b)	70
Type of farm, by predominant activity, 1955—non-African farms	106	71
Size of holdings, 1955—non-African farms	107	71
Land utilisation, 1955—non-African farms	108	72
Acreages under principal crops, 1955—non-African farms	109	72
Estimated capital expenditure, 1955—non-African farms	110	73
Mechanical equipment, 1955—non-African farms	111	73
Employees in agriculture, 1956—non-African farms	112	73
FORESTRY		
Annual production of timber and value of exports	113	74
MINING		
Mineral production: Quantity	114(a)	76
Mineral production: Value	114(b)	77
FUEL AND POWER		
Electricity: Generating capacity	115	78
Electricity: Production and imports	116	78
Electricity: Sales	117	79
Motor spirit sales	118	79
Fuel sales	119	81
Lubricant sales	120	81
Power equipment: Retained imports—Quantity and value	121	81
COMMERCE AND INDUSTRY		
Companies registered	122	83
Business names registered	123	83
Bankruptcies	124	83
Survey of Industrial Production, 1954		
Summary of results	125	84
Numbers employed in industry, by race	126	84
Establishments and employment: Analysis by size of establishment	127	85
Establishments, employment and production: Analysis by size of establishment	128	85
Size distribution of firms: Industrial and commercial, 1956	129	86
Excisable commodities: Local consumption and imports	130	86
BUILDING		
Value of new building completed for private ownership: In main towns	131	88
New buildings completed for private ownership: In main towns	132	88
New buildings completed for private ownership: Analysis by town, 1956	133	89
New buildings completed for local Government ownership	134	89
City Council of Nairobi: Private building plans approved	135	90
Public Works Department: Expenditure on building	136	90
East African Railways and Harbours Administration: Buildings completed in Kenya	137	91
Cement: Supply and consumption	138	91
Building materials: Quantity of retained imports	139(a)	92
Building materials: Value of retained imports	139(b)	92
CURRENCY AND BANKING		
East African Currency Board		
Currency in circulation	140	94
Denominations of currency in circulation	141	94
Transfers of currency within the East African currency area	142	95
Statement of securities held on 30th June, 1956	143	95
Banking		
Kenya Savings Bank	144	96
Kenya Land Bank	145	96
Commercial banks: Liabilities and assets	146	97
Commercial banks: Debits to current account	147	97

NOTICE

Though every care is taken in compilation, no responsibility can be assumed by the East African Statistical Department for the complete accuracy of all statistics contained in this Abstract.

Throughout the tables the following signs have been used:—"—" means NIL, or less than half the final digit.

".." means figures not available.

"()" means estimated.

INTRODUCTORY NOTES

LAND AND CLIMATE

The Colony and Protectorate of Kenya lies across the equator on the east coast of Africa. It is bordered by Ethiopia in the north, by the Sudan in the north-west, by Uganda in the west, and by Tanganyika in the south. It has a relatively long seaboard which is washed by the Indian Ocean.

The total area of Kenya is 225,000 square miles, including 5,000 square miles of water. It has, in fact, two water borders, since in addition to its littoral with the Indian Ocean, its boundaries between Tanganyika and Uganda run through Lake Victoria. There can be few countries of comparable size which contain such a variety of scenery, of climate, of people, and of types of economic and social development.

The seaboard of Kenya has a tropical climate and tropical vegetation. The coastal strip is narrow and inland the country rises sharply. Large plains of scrub and grass are found at a height of some 3,000 to 4,000 feet above sea level which are then followed by rolling uplands at altitudes of 5,000 to 8,000 feet, where the rainfall is sufficient to support plantation agriculture as well as mixed farming of both European and African types. There are, in addition, large areas of natural forests with streams fed from the slopes of some of the highest mountains in Africa. Through Kenya runs the unique Rift Valley, a natural fissure in the earth which stretches from Northern Syria, includes the Red Sea, and after running the length of Kenya, Tanganyika and Nyasaland finally reaches the coast in Portuguese East Africa. In Kenya the floor of the Rift Valley is at places up to 40 miles wide with walls rising several thousand feet to the surrounding hills and plateaux. In the north of Kenya is a huge desert which borders on Somalia and Ethiopia. This vast area of sand and waste stretches for 100,000 square miles, or nearly 50 percent of the total area of the Colony and Protectorate of Kenya.

Kenya shares with her neighbours, Uganda and Tanganyika, Lake Victoria, the second largest inland lake in the world with an area of some 23,000 square miles. The lake lies at an altitude of about 3,800 feet and on it are numerous islands, some of which are scantily populated. Round the shores the land is densely populated.

The climate of Kenya is as varied as its physical structure. Rainfall and climate depend to a large extent on the height above sea level, the distance from large areas of water, and also on the distance from mountains. In spite of its equatorial position, the climatic conditions range from the dry heat of the deserts to perpetual snow on the mountain tops. Kenya's position within the tropics ensures that seasonal variations in climate are limited. In certain parts of Kenya there is a wider divergence between the day and night temperatures than between summer and winter temperatures. Most parts of Kenya enjoy two rainy seasons, one of relatively long duration and the other short. It is, however, impossible to generalise about Kenya's climate.

By studying the meteorological tables in this Abstract it is possible to obtain a picture of the types of climate found in the main towns of Kenya. But it must be remembered that towns cover only a small part of the total range of climatic conditions. In Kenya there are now 900 units reporting rainfall daily to the East African Meteorological Department, 14 full-time weather stations reporting all major aspects of weather changes, and seven part-time weather stations reporting twice daily. Weather information from Kenya is co-ordinated with similar information from the neighbouring territories and reports are broadcast at regular intervals.

The vegetation and animal life of Kenya reflect the variety of its topography and climate. At the coast are found tropical plants, and in the reefs along the coast many kinds of tropical fish. A journey from the main port of Mombasa to the capital city of Nairobi takes one through the huge Tsavo National Park which covers 8,000 square miles and is a reserve for all kinds of wild animals from elephant and rhinoceros to giraffe, wildebeeste and zebra and down to the smallest of the deer and rodents. Plants, trees and birds are found in greater variety on the better watered foothills of the mountains than on the plains.

The total land mass of Kenya amounts to 220,000 square miles. Of this, 52,000 square miles are reserved for African occupation while alienated land, including townships and land held by or available for non-Africans, accounts for 14,000 square miles. More than half the total land area of Kenya consists of unsurveyed Crown land, mainly desert or semi-desert in the Northern Frontier District; 120,000 square miles are considered to be of little use economically. There are nearly 6,000 square miles of forest areas.

THE GOVERNMENT AND THE CONSTITUTION

The recorded history of Kenya dates from very recent times. Although the coast was visited by the Portuguese as early as the fifteenth century, the hinterland was not penetrated, except by a few explorers and missionaries, until the end of the nineteenth century when the history of Kenya can really be said to begin. In 1888 a Royal Charter was granted to the Imperial British East Africa Company which thereupon took control of a wide area of what is now Kenya and Uganda with the purpose of developing the country commercially and abolishing the slave trade. Seven years later the Company was taken over by the British Government.

The first task in the opening up of the country and the abolition of the slave trade, was the building of a railway. At that time Uganda was the centre of interest and the area through which the railway passed on its way to Lake Victoria was considered of little economic value. The railway was financed by the British Government and, starting from Mombasa in 1895, it reached Kisumu just six years later. The development of government and the rise of Nairobi as the centre of government have been described adequately in many books. It must be remembered that before 1920, when the East Africa Protectorate became the Colony of Kenya, the boundaries of the East Africa Protectorate and of Uganda were very different from those existing today.

The period from 1900 saw the formation of the first towns and settlements, the first European farms and missions, and the growth of an administration which had to contend with many problems.

Throughout the whole period political control has remained with the British Crown through Parliament and the Colonial Office. But within this framework there has been gradual constitutional development, culminating in the Lyttelton Constitution of 1954, which introduced a multi-racial system of Government, with ministers drawn from all races and an official rather than an elected majority.

Under the provisions of the Lyttelton Plan, discussions took place towards the end of 1956 which resulted in an increase and some re-distribution of seats. Eight seats in the Legislative Council for African elected members were created, and 400,000 Africans with property, public service or educational qualifications became eligible to vote. Elections under these new arrangements were held in March, 1957. The Legislative Council consists of 58 members of whom eight are official, 20 nominated, 29 elected and one representative. As at March, 1957, there were 13 ministers, comprising eight official members, three European elected members and two Asian elected members.

Local Government in the City of Nairobi and other municipalities and townships has been established for many years, but last six years have seen notable advances in the formation and development of African District Councils and also in local county Councils.

In 1948 the East Africa High Commission was formed to replace the East African Governors' Conference which met in 1926. The East Africa High Commission consists of the Governors of Kenya, Uganda and Tanganyika and under its control are more than 20 departments which provide services common to the three territories. These services include the East African Railways and Harbours Administration, the East African Posts and Telecommunications Administration, both of which are self-financing. The East African Customs and Excise Department, the East African Income Tax Department, and a number of scientific, economic advisory departments such as the East African Statistical Department, and the East African Agricultural and Forestry Research Organization. The method of financing these so-called "non-self-contained" services depends on the purpose of the department, but in all cases contributions are received from each of the East African Governments. The services of the High Commission are controlled by principal executive officers responsible to a Central Legislative Assembly consisting of representatives from each territory together with a limited number of ex officio members.

POPULATION

The study of the growth of the African population presents considerable difficulties because of the lack of basic statistical knowledge, the absence of registration of vital occurrences and the recent elimination of major plagues and famines.

The seaboard of Kenya has long had settlements of traders from Asia, mainly from Arabia and Persia. The east coast of Africa was known for centuries before the birth of Christ and Arab sailors have long used its harbours. The Arabs predominate at the coast to this very day, while there were Indians in the East African territories prior to the arrival of British Government. But in the last 30 years migration from Asia, mainly India, has produced an Asian population which is now nearly five times the size of the Arab population and nearly three times the size of the European community.

It is usually said that the influx of the Asian population came with the building of the Uganda Railway. There were a number of Indians in Kenya before that time but a great increase came with the importation of labour for the railway administration. It is estimated that in 1946 the Asian population was 88,000 rising to 100,000 by 1948 and it is estimated that in 1956 the population was 152,000. This is a 72 per cent increase over the last ten years. A considerable proportion of this increase has been due to immigration and the rest to the natural development of the population which has a relatively high birth rate and a low death rate. The majority of the Asian population live in towns and other urban centres and are engaged in trade and commerce.

The European community has developed along two lines. The original settlers came out as pioneers to develop the Highlands while others were recruited to form the administration and other services of Government and of commerce. Over one-third of the European population of Kenya now lives in the City of Nairobi, and there are about 3,000 European farmers and their families engaged in farming the Highlands. The resident European population in earlier years consisted mainly of adult males and adult females, the children usually being sent to the United Kingdom to school. This has seriously affected the development of the population pyramid, but at the present time there is an increasing proportion of European children in the Colony and the population pyramid is now approaching a more normal European pattern. In contrast, the Asian population pyramid shows that the resident Asian community has been established for a long period of time. There is a large base to the pyramid consisting of children up to the age of 15 years. There are relatively few elderly people, because until recent years elderly people tended to return to India. In the past the Asian community showed a considerable preponderance of men, although this unusual sex ratio has been reduced in the last ten years. In 1948 there were 137 Asian males to every 100 females.

The African population of Kenya consists of many tribes. The four main tribal groups account for only half the total African population. The largest tribe, the Kikuyu, inhabit the area between Mount Kenya and the Aberdare Mountains, and to the north and west of the capital of Nairobi. The second and third largest tribal groups are the Luo and the Baluhya who occupy areas to the west of Kenya on the shores of Lake Victoria. The Luo occupy the central and northern shores of Lake Victoria, and the Baluhya occupy the hinterland of North Nyanza. The fourth largest tribe is the Wakamba who occupy an area in central Kenya, to the east of Nairobi. The total number of main tribes recorded in the 1948 census in Kenya was 87 and there were 19 tribes each accounting for more than one per cent of the African population of the Colony. Most of these tribes have their own languages and social customs, but the lingua franca of East Africa is Swahili.

It is extremely difficult to estimate the population growth of the African in East Africa owing to the absence of basic data. But based on the researches carried out at the time of the 1948 census, and bringing together other surveys and studies made by anthropologists, sociologists, and demographers it is possible to make some estimates. At the present time the African population growth of Kenya is estimated to be in the order of 1 1/2 per cent per annum which will result in the population doubling itself, should that rate continue, in 46 years. It is realized that this is an average rate for the whole of the colony and that rates will differ in different tribes and geographical areas. Population growth was extremely small in the past due to the many endemic diseases and the famines which raged throughout the Colony. The increase in population growth has been relatively rapid and the development might be even faster in the future with the development of medical knowledge, hospitals and hygiene services.

The age distribution of the African population of Kenya has considerable importance in considering economic development. Forty-eight per cent of the African population of Kenya are children estimated to be under 16 years of age, 43 per cent are adult males and females up to 45 years and 9 per cent are elderly people taken to be over 45 years of age. The percentage of children reported may be slightly too high. It will be seen that there is a great preponderance of children in this population, which is an indication not so much of a high birth rate, as a high death rate in previous years. It is, therefore, necessary if children are to be taken out of the working group and placed in schools, for the adult male population to increase its output since the efforts of a few will have to be distributed in economic return among many.

MIGRATION AND TOURISM

The number of non-Africans entering Kenya as permanent immigrants in 1955 (including visitors who subsequently became permanent immigrants) was the largest of any post-war year. This high level was not maintained during 1956 when the number of European permanent immigrants totalled nearly 6,700 compared with 8,000 in the previous year, while the number of Asians entering as permanent immigrants fell from over 6,600 in 1955 to 6,100 in 1956. In 1956 2,700 Europeans were recorded as leaving the colony permanently, the comparable figure for 1955 being 3,100; the position with regard to Asians showed little change over the two years. Considering recorded permanent immigration and permanent emigration together, the net result was an increase of almost 4,000 in the European community in 1956, compared with a net increase of 4,900 in 1955. Among the Asian community the recorded excess of new permanent immigrants over permanent emigrants amounted to 5,600 in 1955 and 5,100 in 1956.

The age composition of the permanent immigrants is interesting for the light it sheds on the increase in the labour force resulting from immigration. The majority of European immigrants are aged between 20 and 49 and, in 1956, 65 per cent of the permanent immigrants fell within this class. Among the Asian community only 48 per cent were between the ages of 20 and 49 years. This position is confirmed by the occupational analysis of permanent immigrants which shows that in 1956 54 per cent of Europeans were recorded as "Retired or not gainfully occupied", which includes women and children, compared with 73 per cent of Asians. This group may, however, be inflated by the inclusion of European wives who will take up employment on arrival, and Asian dependants who will help in family businesses. Among the working group proper the largest number of European immigrants was recorded as taking up employment in the public service, although the contribution of this group fell from 19 per cent in 1955 to 13 per cent in 1956. Only 3 per cent of the European immigrants in 1955 and 1956 recorded their intention of engaging in farming.

The recovery in the tourist trade in 1955, following the easing of the Emergency, was maintained during 1956, in spite of the international crisis towards the end of that year. Over 40,000 persons of all nationalities came to Kenya either as visitors or in transit during 1956, an increase of almost 1,000 over the previous year; many of those recorded in transit stay up to a period of one month in the colony. 8,000 visitors left East Africa through Kenya in 1956; and of those who provided information on their length of stay in the colony, about 45 per cent had stayed in the colony between one and six weeks and just over 20 per cent had stayed for two months or more. Expenditure by tourists in East Africa during 1956 is estimated at approximately £7 million.

EXTERNAL TRADE

The total volume of Kenya's external trade was £102.9 million in 1956, 3 per cent higher than the total of £99.5 million achieved in 1955. Net imports into Kenya in 1956 amounted to £69.8 million compared with £71.5 million in the previous year. The value of exports increased from £28 million to £33 million, domestic exports amounting to £29 million and re-exports to £4 million.

It would appear from these statistics that Kenya had an adverse visible balance of some £37 million in 1956. These figures as they stand are, however, likely to create a most misleading picture of Kenya's external position since a large proportion of the imports brought into Kenya by inter-territorial organizations with headquarters in Kenya, such as the Railways Administration and the Posts and Telecommunications Administration, although debited to Kenya are, in fact, used to provide services for the three East African territories. Similarly, the greater part of the aviation spirit imported into Kenya is used for re-fuelling aircraft of international airlines and when considering the overall balance of payments position account must be taken of Nairobi's importance as a centre of trade and tourism for the whole of East Africa.

Although the value of imports into Kenya during 1956 showed a slight increase over 1955 there was a marked downward trend throughout the year. During the first half of 1956 imports rose by 32 per cent compared with the corresponding period in 1955, but in the second half of the year imports were running at less than 75 per cent of the figure for the same period in the previous year. Moreover, in the second half of the year average monthly net imports attained a level of only 75 per cent of the rate in the first six months. This situation resulted in part from a reduction in Government expenditure on imports following the easing of Emergency conditions and in part from the fact that in the second half of the year many businesses found themselves in an over-stocked position as a result of the improvement of the shipping situation at Mombasa.

The pattern of imports into Kenya in 1956 showed little change from that of previous years. Retained imports of capital equipment represented some 25 per cent of the total, while imports of producers' materials and of consumers' goods represented 35 per cent and 20 per cent respectively. Imports on commercial account increased from £55.1 million in 1955 to £57.7 million in 1956 but this increase was more than offset by a fall in Government imports from £14 million to £8 million. Imports of capital equipment by Government fell by some £5 million largely as a result of a decline in capital expenditure by the Railways Administration. This is reflected in a fall in the value of imports of railway rolling stock and parts from £7.1 million in 1955 to less than £2 million in 1956. Imports of commercial vehicles also declined by half a million pounds, although the value of private motor cars imported into Kenya increased slightly. Imports of sugar and wheat increased both in terms of volume and value, the latter reflecting the failure of Kenya's wheat crop to meet local demand. The recent expansion in the local production of cement is clearly shown by the fall in the imports of that commodity from £696,000 (72,000 tons) in 1955 to £271,000 (26,000 tons) in 1956.

An analysis by country of origin in 1956 is available only for direct imports, which include goods imported into Kenya in the first instance but destined ultimately for one of the other East African territories. The United Kingdom continued to be the largest supplier of goods to Kenya and its share in 1956 amounted to nearly £36 million or 42 per cent of the total. Imports from other British Commonwealth countries came to some £16 million or just under 20 per cent of the total. Of the non-Commonwealth countries, West Germany was the most important supplier of goods to Kenya, imports from that country amounting to £4.5 million in 1956.

Kenya's dependence on agriculture for its overseas income is clearly indicated by the trade returns which show that of the seven principal export items, together accounting for 80 per cent of the value of Kenya's domestic exports in 1956, six are agricultural commodities. Coffee contributed 47 per cent of the total value of Kenya's domestic exports. Nearly 27,000 tons were exported in 1956, an increase of 38 per cent over the 1955 position, while in terms of value there was an increase of over 50 per cent to nearly £14 million. Tea retained its position as the second most important export, although its value decreased slightly from £2.8 million in 1955 to £2.6 million in 1956. Sodium carbonate is the only non-agricultural product of any importance exported from Kenya and in 1956 its export value amounted to £1.5 million, or just over 5 per cent of the total value of domestic exports.

The United Kingdom was again the most important customer for Kenya's products, although her share of the total decreased from 31 per cent in 1955 to just under 25 per cent in 1956. West Germany's share of Kenya exports increased very slightly between the two years and of the £5.5 million worth of goods exported there in 1956 coffee accounted for over £5 million. Germany was, in fact, Kenya's best customer for coffee followed by the United States which took coffee valued at £3.1 million in 1956 compared with just over £1 million in 1955. As a result of this large increase in the value of coffee exported, Kenya's total exports to the United States increased from £2.8 million in 1955 to £4.6 million in 1956.

The increase in the total value of Kenya's domestic exports that occurred between 1955 and 1956 is largely explained by an increase in the quantities exported although the prices obtained for exports increased by some 4 per cent. In this respect Kenya was more fortunate than Uganda where the price index of exports fell by nearly 3 per cent, although not quite so favourably placed as Tanganyika where there was an increase of over 5 per cent in the export price index. Quantity and price index numbers are not calculated for imports into individual territories but the position for East Africa as a whole shows a decrease of 12 per cent in the quantity index and an increase

of rather less than 4 per cent in the price index. If it is assumed that the prices of Kenya's imports followed the trend of those entering

East Africa as a whole it appears that there was a very slight improvement in Kenya's terms of trade in 1956 compared with 1955.

TRANSPORT AND COMMUNICATIONS

Railways and Harbours

The majority of imports into Kenya and Uganda enter East Africa by the port of Mombasa and are carried inland on the main Mombasa-Kampala railway line. The sharp falling off in the level of imports during 1956 reacted on the volume of traffic transported by rail, and railway revenue fell accordingly. At the same time operating costs continued to rise with the result that the surplus available for betterment and development fell far short of the figure estimated. The total surplus of revenue available for appropriation for the Railways and Harbours as a whole amounted to £250,000 compared with over £1·8 million in 1955.

The total goods traffic carried by the East African railway system as a whole increased very slightly in 1956, although the total goods traffic ton miles decreased from 1,688 million in 1955 to 1,678 million in 1956. The number of passenger journeys increased slightly between the two years.

Although a disappointing year on the operational side, 1956 was one of continued development for the Railways and Harbours Administration. The outstanding event was the completion of the Western Uganda railway extension to Kasese, the official opening of which took place towards the end of the year. Although the re-equipping programme was mainly completed in the previous year, 44 new locomotives, 40 coaching vehicles and nearly 600 units of goods stock were placed in service during 1956 and capacity is now stated to be somewhat in excess of current needs. The greater flexibility resulting from this favourable rolling stock position has led to a corresponding improvement in services.

Following the improvement in the facilities for handling cargo at Mombasa, the backlog of cargo awaiting shipment to that port from the United Kingdom was worked off and the Phasing Scheme was ended in July. The total tonnage of cargo handled at Mombasa during 1956 was rather less than 3,200,000 tons, which showed little change from the 1955 position.

The net expenditure by the Railways and Harbours Administration on new equipment, new works and renewals of existing assets during 1956 was £81 million, a decrease of £91/4 million on 1955. Of this sum, £11/4 million was a charge against the Renewals Fund while the remainder was financed to the extent of £1 million from Betterment Funds and £6 million by long-term loans and short-time borrowing. In 1956 £3 1/2 million was raised on the London market and a further £8 1/2 million as part of the High Commission Loan taken out in April, 1957, thus leaving £13 1/4 million of the existing Loan programme still to be raised on a long-term basis.

Airways

Work continued on Kenya's new airport at Embakasi and it is now hoped that aircraft will be able to land there in the spring of 1958. 1956 saw a further increase in the movement of aircraft at the two Nairobi airports although the number of passengers carried by the local airline, East African Airways Corporation, declined. However, the load ton miles carried and the gross revenue of the airline showed a further rise and plans were announced for using Canadian aircraft on its principal routes.

Roads

There was a further rise in new vehicle registrations during 1956 and a total of 63,626 vehicles of all types were licensed during the year in the Colony, a rise of 13 per cent over 1955. One of the interesting features of motor vehicle statistics during the year was that the number of motor cars imported from the United Kingdom fell slightly while those imported from Western Germany showed an increase of 140 per cent over 1955.

The mileage of bituminized roads under the control of the Kenya Road Authority was increased by a further 43 miles during 1955/1956 and at the 1st July, 1956, comprised some 400 miles out of a total road network of over 24,000 miles in respect of which grants are paid from the Road Fund. In addition, certain roads and tracks are maintained by the Forestry Department and the Kenya National Parks organization and by Local Authorities (other than African) from local resources. There are also certain unclassified roads and tracks in African areas maintained from local resources. The cost of widening, re-aligning, draining and bridging the existing gravel roads, quite apart from the extensive maintenance which such roads require, makes heavy demands on the finance which the Kenya Road Authority can place at the disposal of the Public Works Department and the Local Authorities for this purpose. The revenue of the Authority is derived mainly from vehicle licences and a downward revision of the revenue estimated to accrue from this source in 1956/1957 has forced the Authority to reduce maintenance grants by 15 per cent for the first six months of 1957.

Postal Services and Telecommunications

The East African Posts and Telecommunications Administration, which is a self-financing department of the East Africa High Commission, controls all postal services and telecommunications throughout Kenya, Uganda and Tanganyika.

During 1956 post offices in Kenya handled 69 million letters and similar articles, of which nearly 50 million letters represented internal movements. Internal mail showed a slight increase over 1955, which was more than offset by a fall in the number of letters received from or despatched to countries outside East Africa. Parcel post traffic also declined from over 1 million articles handled in 1955 to 826,000 articles in 1956. A fall in the number of external parcels more than accounted for the overall decrease and may be explained in part by the improvement in the shipping position at Mombasa which made importers less dependent on the parcel post service for goods which were required by a definite date. The number of parcels received from Great Britain fell considerably in the middle of 1956.

Statistics for telegrams and telephones are not normally published for Kenya alone, but the figures for East Africa give a fair indication of trends in Kenya. The decline in the use of the telegram service, which has been apparent during the last few years, continued in 1956, but this cannot be considered abnormal in view of the progressive improvements in the telephone service. In East Africa as a whole over 44 million local calls were handled in 1956, which represents an increase of 8 per cent over 1955, while the number of trunk calls showed an increase of 5 per cent between the two years. The phenomenal growth of the telephone service in East Africa is illustrated by the rise in the number of exchange connexions from under 9,000 in 1949 to nearly 30,000 at the end of 1956. The rate of expansion that occurred in 1956 appears to have been somewhat less than in previous years and, although there is still a large unsatisfied demand for telephone facilities throughout East Africa, the waiting list for telephone connexions numbered only 6,200 at the end of 1956 compared with 6,800 at the end of 1955.

Revenue from all services in 1956 was £4·5 million but with an operating expenditure of £4·2 million the surplus of nearly £0·3 million was insufficient to cover the payment of interest and redemption charges, with the result that £69,000 had to be transferred from the general reserve fund to make good the deficit. Capital expenditure by the Posts and Telecommunications since its inception as a self-financing department on 1st January, 1949, has amounted to £9·5 million and it is planned to spend a further £4·5 million on capital development during the period 1957 to 1960. £3 million of the loan of £11·5 million raised by the High Commission on the **London** market in April, 1957, will be used for this purpose.

(X)

AGRICULTURE

In 1956 the net output of agriculture, excluding African subsistence production, amounted to nearly £310 million, or 24 per cent of the cash geographical income of Kenya. Coffee continued to be Kenya's most important income producer, although the total crop of 18,500 tons in the 1956/1957 season fell short of the record crop of 24,000 tons realized in the previous season. The three highest classes of coffee represented 21 per cent of the 1956/1957 crop compared with 13 per cent a year earlier, and this improvement in quality, together with the higher world price for coffee, resulted in coffee farmers' incomes falling much less than the drop in production would appear to suggest. African production of coffee increased from 800 tons in 1955/1956 to 1,500 tons in 1956/1957.

Tea, a crop from which it is hoped to receive increased overseas income in future, showed an expansion in production from 8,500 tons in 1955 to 9,500 tons in 1956. This was, however, accompanied by a fall in the world price with the result that the total value of tea exports fell between the two years. Sisal output increased by 1,600 tons, from 38,000 tons to 39,600 tons. 1956 was a bad year for wattle and, although the production of wattle bark by non-African farmers increased slightly, by 3,600 tons, African production decreased by almost 10,000 tons. Exports of wattle bark extract fell from over £2 1/2 million in 1955 to £1 1/2 million in 1956, reflecting the lower level of production. The position of the wattle farmers has been further aggravated during the first part of 1957 as a result of a further serious drop in the world price of wattle to one third of that previously prevailing.

The production of cereal crops continued to give cause for concern in 1956. Wheat production declined from 121,000 tons in 1955 to 116,000 tons in 1956 and Kenya had again to import wheat in order to satisfy the requirements of the population. Although the output of maize by non-African farmers increased very slightly over 1956, the total maize crop recorded a serious fall, largely as a result of a considerable drop in African production in Nyanza Province. This decrease, which was mainly due to adverse weather conditions, resulted in a decline of nearly three quarters of a million pounds in the cash income of African farmers in Nyanza which was only partially offset by increases in production by African farmers in other Provinces.

The livestock industry had a more encouraging year with the number of European cattle sold for slaughter increasing by some 20 per cent from 56,000 to 68,000. The number of sheep sold for slaughter and the number of pigs handled both showed an increase, the expansion in the latter being particularly welcome after setbacks in recent years. Whole milk sales increased from 13.5 million gallons to 14.5 million gallons and sales of butter-fat amounted to 9.5 million lb. in 1956 compared with 8.7 million lb. in 1955.

In the African farming areas radical changes are now taking place. African agriculture is developing towards intensive cash crop farming based on the consolidation of scattered holdings into economic units accompanied by farm planning and resettlement in new areas. During 1956 the process of land consolidation was pushed forward particularly in the Central Province where, according to the report of the Department of Agriculture, the process was proceeding so fast that it was in danger of getting beyond effective follow-up.

The Swynnerton Plan for the intensified development of African agriculture has now been in operation for three years and, although there have been some temporary setbacks due to adverse weather conditions, cash crop production is expanding and the African contribution to production and export is growing rapidly. It is estimated that up to the middle of 1957 a total of over £4 million will have been spent on the Swynnerton Plan and it is planned to spend a further £53/4 million as part of the 1957/1960 Development Programme.

During 1956 two reports, which may have far-reaching repercussions on the future of agriculture and the European farmers in particular, were published. The first of these was issued by the Committee of Enquiry into the Dairy Industry, set up to consider the problem of marketing dairy produce. A substantial increase in dairy production was envisaged in an earlier report on the general economy of farming in the Highlands of Kenya. The dairy industry report recommended the establishment of a statutory board for the regulation of the seasonal production of dairy produce and the disposal of the produce in such a manner as to secure reasonable and stable prices to producers and adequate supplies of satisfactory quality to consumers at reasonable prices. The second report, of an enquiry into the meat industry of Kenya, endorsed the existing statutory control of the European meat producer vested in the Kenya Meat Commission and recommended the introduction of more live weight buying and a new grading system designed to ensure uniformity in quality and to encourage the production of a "choice grade" beef. The report did not support the extension of the control of the Kenya Meat Commission to African areas.

MINING

No major mineral ore deposits were discovered in 1956 to give any hope that Kenya's present relative poverty in mineral resources might soon be ended. Geological surveys continued, however, and although much of the Northern Frontier Province has still to be systematically explored for mineral wealth, high quality chrome deposits and several outcrops of copper have been reported north of Kapenguria. Investigations are continuing into the possibility of the deposits of nobium and other rare earths discovered near Mrima Hill being extracted on a commercial basis.

Notwithstanding the absence of new discoveries, Kenya's mineral production achieved a record value of £2.4 million in 1956 compared with £1.9 million in 1955. These figures exclude the output of a considerable quantity of limestone and gypsum which was used in the production of cement at Bamburi. The value of the total output of cement produced from local ores in 1956 amounted to £1.3 million.

Kenya's most valuable mineral, soda ash, contributed most to the increase in the value of mineral production in 1956. Output rose by £283,000, bringing the total value of production for the year to £1.6 million. The new development of the Macalder-Nyanza Mine under the auspices of the Colonial Development Corporation started to show results in 1956, and copper became the second most important mineral in the Colony with production estimated at £189,000. Salt production showed a decline of 11 per cent but gold production, though largely in the hands of small units, rose by 50 per cent. Increased production was also recorded for silver, diatomite, carbon dioxide gas, graphite, gypsum, kaolin, meerschaum and asbestos.

FUEL AND POWER

Electricity

The steady rise in electricity consumption since 1945 continued in 1956 when sales totalled 222.8 million kilo-watt hours compared with 194.6 million kilo-watt hours in the previous year. However, this increase of some 14 per cent must be compared with an increase of 20 per cent from 1954 to 1955 while reports from the electricity companies suggest that the rate of increase of sales was slackening further towards the end of the year.

During 1956 installed capacity was increased by 14,515 kilo-watts largely through the coming into operation of a new power station at Eldoret equipped with the largest diesel fuel engines in East Africa and of two oil burning 5,000 kilo-watt units at Kipevu. At the same time, work was pressed ahead on the £3.8 million trans-Kenya power line which, when completed in 1958, will transmit 45,000 kilo-watts per annum from the Owen Falls Dam to Nairobi, under a bulk supply agreement with the Uganda Electricity Board. In December, the East African Power and Lighting Co. Ltd., announced the formation of a new wholly owned subsidiary company, the Coast Power Co. Ltd., which will take the parent company's place as bulk supplier of electricity for the Coast Province.

In June, 1956, the average price of electricity was increased by approximately 10 per cent and another similar increase is scheduled for August, 1957.

Petroleum

Although the price of petrol was increased in line with world prices towards the end of 1956, there was no interruption of supplies as a result of political events in the Middle East and sales of motor spirit rose from 311 million gallons in 1955 to 33.3 million gallons in 1956. This 7 per cent increase in sales continues the trend that has been uninterrupted since the war but it is interesting that the number of vehicles on the roads has been increasing at a faster rate than the sales of petrol over the last few years. This seems to suggest either that vehicles are being used less intensively or that the smaller type of car with a lower consumption of petrol is being used increasingly. In this connexion it may be noted that 54 per cent of motor cars in Kenya on 31st December, 1956, were of 1,500 c.c. or less.

Statistics of sales of other petroleum fuels and also lubricants are included in this Abstract for the first time.

COMMERCE AND INDUSTRY

Commerce

1956 was not an easy year for the commercial sector. It followed a period during which Emergency expenditure and the purchasing power generated by the presence of large numbers of H.M. Forces in Kenya created an abnormally high level of demand. The number of troops in the Colony declined during 1956 while expenditure by Government on security services and the purchase of equipment was less than in 1955. Although these factors were to some extent compensated for by the increased expenditure of private individuals and of Government on agricultural development and social services, there was no appreciable increase in overall demand. In consequence a number of firms who had planned on the basis of such an increase found themselves over-stocked. This situation was accentuated by the easing of congestion in the port of Mombasa during 1956 which is reflected in the fact that although imports were extremely buoyant for the first few months a marked decline became apparent during the rest of the year. Although the number of new companies, both local and foreign, increased during 1956, there was also an increase in the number of bankruptcies from 46 in 1955 to over 70 in 1956. Of these, over two thirds were reported in the second half of the year and many of them were small businesses.

The closing of the Suez Canal in the last quarter of 1956 aggravated the difficulties of the commercial community, although the high level of stocks in the Colony at the time prevented a general shortage of goods. Costs rose slightly as a result of the 15 per cent shipping surcharge on goods levied by the shipping companies and some delays were experienced in delivery.

No census of distribution has yet been made in Kenya but a trend towards greater specialization in distribution, particularly in the towns, is becoming apparent. The commercial sector is, however, still dominated by the small trader and it is believed that there are some 15,000 small retail outlets mostly run on a family basis and frequently not specializing in any particular type of goods beyond the range required by the average household.

Industry

Detailed information on secondary industry in Kenya became available for the first time with the analysis of the first Survey of Industrial Production. This was carried out during 1955 and 1956 and covered mining, quarrying, manufacturing and building and construction activities for the year 1954. Although details of the production of individual commodities have still to be obtained much more is now known of the size and extent of secondary industry in the Colony.

The summarized results of the 1954 survey are included in this Abstract and they show that in 1954 the gross output of this sector of the economy amounted to nearly £49 million and the approximate net output was £19 million. Building and construction made the largest single contribution to both gross and net output, reflecting the considerable development at the present time. The chemical industry, including soda ash, was the second largest in terms of net output followed by the beverages and tobacco group.

Since the survey was made it is known that further expansion has taken place in the manufacturing sector, especially in certain industries, although the rate of growth in 1956 was more modest than in earlier years. With the opening of the East African Tobacco Company's factory in Nairobi, the manufacture of cigarettes and tobacco in the Colony has risen considerably, while the production of cement has nearly trebled since the factory at Bamburi came into production during 1954. The range of products is widening and there are indications that the size of the average establishment is increasing. However, industry in Kenya still consists mainly of small units and the 1954 survey revealed that approximately 71 per cent of industrial establishments employed less than twenty persons and that some industries such as tailoring, shoe repairing and furniture making consisted almost entirely of small units.

BUILDING

The Kenya building boom of 1955 continued into 1956 when even more buildings were completed for private ownership in the six main towns than in the previous year. 827 residential or mainly residential buildings were completed in the year which added nearly 3 million square feet to the urban housing capacity. As in 1955, just over 60 per cent of the new houses were built in Nairobi while 26 per cent were built in Mombasa compared with 15 per cent in 1955.

Over 2 million square feet of commercial and industrial buildings were completed in 1956, an advance of 44 per cent on 1955. 60 per cent of these buildings were erected in Nairobi and 27 per cent in Mombasa.

Expenditure on building by the Public Works Department showed a further decline from the peak of 1954. Central Government office blocks were completed, Emergency expenditure was declining while additional funds for development were scarce. The total value of buildings completed for the municipalities also showed a decline during 1956 but this was due to the fact that the value of buildings completed for the City Council of Nairobi showed a considerable drop. Although during the year work advanced on the extension of the Town Hall, this was not completed in 1956 and does not, therefore, figure in the statistics of municipal buildings. The value of buildings completed in all the other municipalities showed an increase over 1955.

Although there are indications that the growth in public building is slackening, there is as yet little evidence that any decline in private building will occur in the immediate future. The value of building plans passed by the Nairobi City Council during 1956 exceeded that for 1955 by 10 per cent.

CURRENCY AND BANKING

The report of the East African Currency Board for the year ended 30th June, 1956, shows that the total currency in circulation in the East African Currency Area increased only slightly during the year—from £60·4 million to £60·7 million. This was the smallest percentage increase since 1947. It is impossible to make any estimate of the currency circulating in any individual territory on the East African mainland, since currency moves freely between all territories without legal restrictions.

The proportion of total currency held in the form of notes continued to rise in 1956, being 81·5 per cent against 81·2 per cent in 1955 and 69·8 per cent in 1950. The proportion of coin in the total currency declined correspondingly.

Notwithstanding depreciation in the value of the investments held in the Currency Reserve Fund, the market value of sterling investments held by the Fund on 30th June, 1956, together with its large holding of Treasury Bills, exceeded the value of currency in circulation, less the estimated net metal value of coins, by some £1·4 million. The East African currency could therefore be said to be more than one hundred per cent backed by sterling assets. However, under the revised regulations of 16th September, 1955, defining the constitution, duties and powers of the East African Currency Board, the Board is allowed to hold issued securities of the constituent territories provided that their total cost price does not exceed the equivalent of £10 million sterling. The 1956 Currency Board Report indicates that advantage was taken of this new clause and £191,000 of Kenya Stock was purchased up to 30th June, 1956. Additional purchases of local issues have been made since and by the middle of 1957 approximately £5 million nominal of such issues was held by the Fund, of which £1·9 million nominal was on Kenya account.

The small increase last year in the currency in circulation was accompanied by a decline of 11 per cent in total bank deposits. At the same time there was a movement from demand to time and savings deposits and, in consequence, demand deposits fell proportionately more than total deposits. This fall was in fact greater than that in advances and bills discounted, in spite of a more cautious lending policy on the part of the banks. Bank liquidity thus tended to decline somewhat although, on the other hand, savings and time deposits achieved record levels in response to the higher rate of interest offered by the banks on money deposited in these accounts.

PUBLIC FINANCE

For the last five years Kenya's Budget has been dominated by mounting Emergency expenditure which, in 1954/1955, was greater than the total Budget of 1950. However, the Appropriation Accounts for the year 1955/1956 showed for the first time a drop in the contribution to the Emergency Fund and heralded the eventual return to good order and normality in the sphere of public finance. The contribution to the Emergency Fund still amounted to £14 million in that year and the total gross expenditure from the Colony Account was £40·2 million, equivalent to approximately 25 per cent of the estimated geographical income of the Colony. The Revised Estimates for 1956/1957 showed a further rise in total expenditure, although the Draft Estimates for the following year anticipated a drop from £45·3 million in 1956/1957 to £42·1 million. Emergency contributions in 1957/1958 were estimated at £4·4 million compared with £8 million in the previous year. A straightforward comparison of the contributions to the Emergency Fund tends, however, to give a misleading impression of the extent to which Emergency expenditure is declining, since expenditures of a permanent recurrent nature are being transferred from the Emergency to the Colony Account.

In spite of the heavy demands on available funds made by expenditure on internal security over the past five years economic and social services continued to expand. Gross expenditure on social services in 1957/1958 was estimated at £8·4 million compared with £3·8 million in 1952; the comparable figures for expenditure on economic services were £7·6 million and £3·9 million.

The Government of the United Kingdom has given generous financial assistance to Kenya in order to meet the cost of the Emergency and to maintain expenditure on the basic services at a high level. This assistance reached its peak in 1955/1956 when Kenya received £10 million in the form of grants and loans from Her Majesty's Government. Similar assistance will be required to the extent of only £4 million in the financial year 1956/1957, and it is anticipated that this will be further reduced to £3 million in 1957/1958.

Considerable funds need to be injected into the economy if it is to develop fully and rapidly and if the standard of living of the inhabitants of the Colony is to be raised. Formal development planning in Kenya began with the 10-year programme in 1946 under the auspices of the Development and Reconstruction Authority. The programme was terminated in 1953 and converted into a three-and-a-half year programme covering the years 1954/1957, during which period total development expenditure of £35·5 million is envisaged. Early in 1957 a further development programme was published under which expenditure of £23·5 million is planned during the period 1957/1960. The scope of this programme is limited by the fact that as a result of Emergency expenditure no substantial surplus on current account is likely to be realized in the next few years, so that Kenya will have to rely mainly on her share of the loan money available for all Commonwealth countries from the London capital market. Grants are, however, made available to Kenya for specific purposes under the 1945 Colonial Development and Welfare Act and the Government has also raised money on the local capital market. Of the total £23·5 million which it is anticipated will be spent over the next three years, 65 per cent will be devoted to economic services (of which over half will be allocated to agricultural development), 19 per cent to social services and the remainder to security and general administrative services.

Kenya is dependent on customs and excise duties and on income tax as its principal sources of revenue and the importance of the latter has tended to increase in recent years. For 1956/1957 and 1957/1958 it was estimated that revenue from this source would be approximately equal to that derived from customs and excise duties. As a result of the serious fall in the volume of imports during the latter part of the 1956/1957 financial year the estimate of revenue from customs duties had to be revised from £10·7 million to £7·8 million. In the 1957/1958 Estimates anticipated revenue from this source was £8·5 million compared with the record figure of £9·4 million realized in 1955/1956.

Many miscellaneous amounts have in the past been brought into the general revenue account as departmental revenues but from 1956/1957 onwards it is intended that they will be retained by the departments concerned as an "appropriation in aid" to set against their expenditures and they will not therefore enter into the revenue account. These revenues are shown in the tables of this Abstract as "Reimbursements".

The principal taxation changes proposed in the 1957 Budget were that the two remaining export taxes, those on wattle and hides, should be abolished and that the existing African Poll Tax and Personal Tax should be replaced by a graduated Poll Tax payable by all persons irrespective of race. It was also proposed that the special tax on the Kikuyu, Embu and Meru tribes should be reduced to Sh. 15 per year and that taxation on live sport should be abolished.

GEOGRAPHICAL INCOME

Preliminary estimates for 1956 indicate that Kenya's geographical income amounted to £159.0 million, or approximately the same as the final figure for 1955. This is the first year since the series of geographical income estimates was started in 1947 that no increase over the previous year has been recorded, although it is possible that when the final figures for 1956 are computed these will show a slight increase in money terms over 1955. Over the nine year period 1947-1955 the geographical income increased at an average annual rate of 18 per cent, the largest annual increase (26 per cent) being recorded in 1955.

This levelling oil in the geographical income in 1956 reflects the fall in the availability of purchasing power resulting from the departure of British troops from Kenya, the reduction in the numbers employed in the security departments of Government and in Emergency expenditure by Government, and the impact of the credit squeeze. All these factors resulted in money becoming scarcer and in the curtailment or postponement of both public and private plans for development.

The amount of geographical income received in the form of salaries and wages remained constant between 1955 and 1956 at approximately £66 million, although it must be remembered that the figure for 1955 was inflated by the inclusion of arrears of salary paid to public servants in that year following the acceptance by Government of the recommendations of the Lidbury Report. Profits in the private sector, including the earnings of self-employed persons, fell slightly from just over £49 million in 1955 to £48.5 million in 1956.

Agriculture (including subsistence agriculture) continued to make the largest single contribution to net product, although its share fell from 39.5 per cent in 1955 to 38.5 per cent in 1956. Considering the cash sector alone (non-African and African marketed produce) the net product of agriculture declined by about £2.5 million over the two years. The smaller coffee crop in 1956/57, compared with the bumper crop of the previous year, and a disappointing maize crop affecting mainly the African farmers in Nyanza Province, were largely responsible for the fall. Commerce, finance and insurance in 1956 showed a slight improvement over 1955, the position of manufacturing industry remained virtually unchanged whilst the net output of transport declined from £11.3 million in 1955 to £10.7 million in 1956. The effects of the credit squeeze on building for commercial use and the slowing down of building by Government did not make themselves felt until the end of 1956 and over the year as a whole the net output of the building and construction industry increased by over half a million pounds and its contribution to total net product rose from 5 1/2 per cent to over 6 per cent.

RETAIL PRICES AND COST OF LIVING

The cost of living in Kenya remained relatively static during 1956 and the Nairobi cost of living index, which excludes rent, recorded an increase of only 4 points, or 1 1/2 per cent, during the year. The food, drink and tobacco group and the domestic servants' wages group were mainly responsible for the increase in the cost of living in Kenya, the latter following the general upward trend in wages. In the food group meat prices increased during the year while prices of tea and coffee also rose in sympathy with the trend in world movements. Clothing prices fell slightly over the year but the transport group was affected by the increase in oil prices following the closing of the Suez Canal. The position in other groups remained virtually unchanged during 1956. By the 30th April, 1957, the Nairobi cost of living index had risen by a further 6 points since the end of 1956, largely as a result of further increases in servants' wages and rises in the price of certain locally produced commodities and services.

There is at present no index available which measures the change in the cost of living of the African labourer. It appears, however, from the prices collected for the purpose of calculating the statutory minimum wage that the price of goods mainly consumed by this class of African showed little change over the year in Nairobi, although some increases, largely resulting from seasonal shortages, took place in certain provincial centres.

EMPLOYMENT AND WAGES

In the field of employment and wages, 1956 proved to be a year of consolidation rather than one of progress. The total number employed fell by 18,000 in 1956, due entirely to a reduction in the numbers of Africans employed. There was also a decrease of the order of 1,000 in the number of Europeans employed, but this was offset by a similar rise in the number of Asians employed. The decrease in employment took place chiefly in the public services, owing to reductions in the size of the security forces, and in agriculture, where the number of casual workers employed on non-African farms decreased by 25,000. This, together with an increase in the number of regular employees in agriculture, suggests a return to more normal conditions after the record coffee crop of 1955 rather than a permanent decline in the demand for labour by agriculture. In private industry the only appreciable rise in numbers employed occurred in the building and construction industry.

The total numbers employed in towns decreased by nearly 9,000. Among men employed full-time in Nairobi, the number of Africans fell by 1,100 but the position with regard to non-Africans remained virtually unchanged, a fall of 500 in the number of Europeans employed being offset by a corresponding rise among Asians. In Mombasa there was a drop of 4,300 in the numbers employed, resulting both from a reduced demand for dock labour and a lower level of employment in the public services.

Despite this recent fall in the numbers employed, there were still 54,000 more persons in employment in 1956 than were recorded in 1954. This increase has been spread over the whole field of employment and among all races. The number of Europeans in employment rose by about 2,000, the corresponding increases for Asians and Africans being 3,000 and 50,000 respectively.

The total wage bill rose by just over £11 1/2 million between 1955 and 1956, compared with an average annual increase of about £5 million between 1949 and 1954, and of £17 million in 1955. There were only minor changes in the wage bills of individual industries in the private sector, the overall result being a rise of just over £2 million. The total wage bill of the public services fell by half a million pounds largely as a result of the smaller numbers employed by the Kenya Government. In the individual towns of Kenya the wage bill changed very little, and the total wage bill for all towns remained the same as in 1955, at just under £45 million.

The net effect of the decrease in the numbers employed and the small increase in the wage bill was to increase average wages over the whole field of employment between 1955 and 1956 by about 2 to 3 per cent.

The statutory minimum adult wage in the nine towns of Kenya where the Minimum Wage Order is in force was increased by 10 per cent as from 1st January, 1956. This increase was in furtherance of the Government's declared policy, following the recommendations of the Report of the Carpenter Committee on African Wages (1954), of advancing from a basic "youth" minimum wage (calculated in accordance with the formula recommended in the Carpenter Report) to a "family" minimum wage fixed at 1.67 times the "youth" wage over a period of five years by annual increases determined in the light of prevailing circumstances, economic and otherwise. A further advance of Sh. 2/50, applicable to all nine towns, was granted with effect from the 1st January, 1957. Further increases in the basic "youth" minimum were introduced in four provincial towns as from the 1st June, 1957, following increases in the cost of certain commodities entering into the formula used for the calculation of the wage. The "adult" wage in those towns was adjusted accordingly, and this wage now ranges from Sh. 79/50 per month in Mombasa to Sh. 85 per month in Nairobi. In addition to the minimum basic wage, a housing allowance is payable by all employers who do not provide free housing, based on the average economic rent of accommodation in local authority African housing locations.

EDUCATION

There is compulsory education for European children of Kenya residents between the ages of seven and fifteen. In addition, the schools at present provide facilities for European children from certain other East African territories and also for the children of members of H.M. Forces in East Africa. In 1956 there were 59 European schools in Kenya catering for over 10,000 children, over a quarter of whom were receiving secondary education. Two-thirds of the students were at Government schools and over one-third were boarders.

Government expenditure in 1955/1956 on European education amounted to £935,000, of which more than £100,000 was spent on school buildings. Government revenue in boarding and tuition fees amounted to £488,000 during the year.

It is compulsory for Asian boys in townships to attend school from seven to fifteen years of age. Nine new Asian primary schools were opened during 1956, bringing the total number of such schools to 119; the number of Asian secondary schools remained unchanged at 20. There were altogether over 40,000 pupils enrolled at Asian schools in 1956, of which 14 per cent were being taught at secondary level. Nearly twice as many boys as girls were receiving secondary education during that year, although the number of Asian girls at teacher training schools increased to 114, compared with only 76 boys. Of the total of 119 Asian primary schools 85 were Government-aided, catering for 17,000 or 50 per cent of all Asian pupils at that level; of the secondary schools 8 were Government-aided, with a total enrolment of 1,140 pupils or about one-fifth of all Asian secondary pupils. In 1956 there were only 11 private and unaided Asian schools (nine primary and two secondary), catering for less than 3 per cent of Asian pupils. The educational system is identical with that followed in European schools.

Government expenditure on Asian education in 1955/1956 was £1,038,000 of which nearly £300,000 was spent on buildings either directly or in the form of grants-in-aid. £127,000 was received in boarding and tuition fees.

Arab education, which is mainly centred in Mombasa, is provided separately, but education for Arab children is not compulsory. There are now nine primary schools for Arabs and one secondary school with a total enrolment of just over 2,400 children. The Government spent £74,000 on Arab education in 1955/1956.

There is no compulsory education for Africans, which is now organized into three stages of schooling, primary, intermediate and secondary, each stage being of four years' duration. In 1956 there were 3,527 African schools with nearly 450,000 children attending. Less than 1 per cent of African pupils were receiving secondary education, compared with 12 per cent at the intermediate stage and 87 per cent at the primary stage. Rather more than one quarter of the African pupils were girls.

Of the 3,500 primary and secondary schools for Africans, 28 were Government schools and 450 were managed by District Education Boards. The Central Government spent approximately £1,900,000 on African education in 1955/1956, of which £1,200,000 consisted of grants-in-aid and a quarter of a million pounds was devoted to buildings. Fees amounting to £445,000 were collected from Government and Government-aided schools.

There were 49 teacher training establishments for Africans in Kenya in 1956, with nearly 3,000 Africans under training. A further trade and technical school was opened during the year, bringing the total of such institutions to 4, with almost 1,000 students enrolled.

The Royal Technical College of East Africa, situated in Nairobi, was officially opened in October, 1956, although students had been attending introductory courses since April of that year. The College provides advanced training in technical and professional subjects for students of all races from all East African territories. 136 students from Kenya were in residence in 1956. 222 students from Kenya were attending Makerere College, Uganda, and a further 1,195 students were following courses of higher education overseas in 1956.

Under the 1957/1960 Development Programme it is planned to spend over £2 million on education, of which £750,000 will be allocated to buildings. A new feature in this programme is the emphasis being placed on technical and trade education, and for the first time development funds are being made available for expanding facilities for the training of skilled artisans and supervisory technical staff.

The East African Literature Bureau, administered by the East Africa High Commission, was established in 1948 with the purpose of fostering and meeting the demand for books of all kinds among the literate Africans. This is done by the publication of books and the distribution of general literature through a postal service and a network of bookbox and static libraries. The extent to which the activities of the Bureau have expanded may be gauged from the fact that the number of volumes published has increased from 10,000 in 1948 to nearly a quarter of a million in 1955/1956 and that the number of books issued through the library service has more than trebled between 1952 (the first effective year of operation) and 1955/1956.

POPULATION AND VITAL STATISTICS

Notes and Definitions

Population statistics for the 1948 census relate to the *de facto* civil population only. Wives and families of members of the armed forces are included, and in previous censuses it is believed that this same breakdown was followed. The non-native population count was made on the night of the 25th February, 1948, but the African population was enumerated during the week commencing 23rd August, 1948. For areas in the Northern Frontier Province, Samburu District and the East Suk Area of Baringo District, estimates have been made in lieu of a census enumeration.

In developing territories, intercensal changes are due partly to increases in population and partly to improvement in the organization of census taking. The improvement in the general organization since 1911 must be taken into consideration when studying the percentage increase in the population since that date. No quantitative appreciation of the increase due to this improvement can be made.

The statistics have for simplicity been shown to the nearest unit in most instances, but this degree of accuracy is not assumed.

Race

The term "Indian" when applied to a race refers to those persons whose ancestors were resident in the sub-continent of India. It is a purely descriptive term, but excludes persons from the Portuguese territory of Goa.

Townships

The statistics of the urban population are based on those householders reporting residence within township boundaries, which, due to frequent changes, are not always well known by residents. For this reason, the statistics quoted for certain townships may be only approximate.

Population Estimates

Estimates of the population for years following 1948 were made as follows. The results of the 1948 census were used as a base: a natural increase of 1 per cent for Europeans, 2 1/2 per cent for Asians and 1 1/2 per cent for Africans per annum was added to the census totals. Estimated immigration and emigration for each of the non-native races was then computed and used to adjust the base figures allowance being made for the under-enumeration of emigrants. Persons who entered as visitors and later became permanent residents were included. The number of unknown factors involved make these estimates subject to some error, but it is believed that they furnish a reasonable indication of the changes in population in the years since the 1948 census.

Vital Statistics

The statistics of births and deaths maintained by the Registrar-General may be considered reliable in respect of European and of Asian births, but those of Asian deaths undoubtedly understate the true position to a serious degree. Statistics of late registrations i.e., registrations of birth made more than six months after the event and of death more than one month after the event, are excluded. The coverage by the Registrar-General of vital statistics of the African community is at present virtually non-existent.

The tables of births and deaths in Nairobi are compiled from notifications of births and deaths to the City Medical Officer of Health; the figures shown relate only to residents of Nairobi.

*The statistics of the population residing within township boundaries are based on those census schedules showing residence in towns. As boundaries are not always known by householders it is possible, especially in the case of the African population, that the statistics are not entirely consistent.

†Estimated population of Nairobi as at mid-1956: Europeans 20,000; Asians 70,000; Africans 120,000; total 210,000.

Estimated population of Mombasa as at mid-1956: Europeans 2,330; Asians 30,670; Arabs 15,600; Africans 49,500; total 96,300.

*No census of Africans was taken in the Northern Frontier Province, Samburu District and the East Suk Area of Baringo District. These figures are District Commissioner's estimates.

†It should be noted that the areas of Provinces and Districts are quoted as at the time of the 1948 Census. Since then, several revisions have been made, see Table 1 for latest data. The difference in the total area of 223,478 sq. miles and that of 224,960 sq. miles quoted in Table 1 is mainly accounted for by the exclusion of 1,447 sq. miles of Lake Victoria which lies in Kenya.

MIGRATION

Notes and Definitions

Immigration statistics are collected under an Immigration Ordinance and emigration statistics are collected under the Statistics Act, 1949. Every person entering the territory is obliged by law to complete a form except, since August, 1948, visitors to East Africa passing through the E.A. High Commission Territories and between these territories and Zanzibar. These visitors are required to complete a form only on their first entry into one of the E.A. High Commission Territories or Zanzibar. There are immigration officers at seaports and main airports, but there is no strict land frontier control. Statistics of migration by sea and air are relatively accurate but those of land migration are liable to considerable error.

The categories for migrants used in the compilation of migration statistics are not legally defined. In general the attempt has been made in practice to define visitors so as to satisfy the requirements of the International Tourist Travel Association and "permanent" migrants for the purposes of population studies. Since entry permits and passes are issued with a different purpose, there are cases where it is slightly doubtful into which category a migrant should be placed. The number of such cases is, relatively, very small, however.

OLD RESIDENTS:

Persons returning to the territory are classified as old residents if—

- (a) they have a Certificate of Permanent Residence; or
- (b) they have a valid Re-entry Pass; or
- (c) if they have been resident in the territory (other than as a visitor or person in transit as defined below) and have been absent for a period of less than one year.

NEW PERMANENT IMMIGRANTS:

Persons entering the territory are classified as new permanent immigrants if they are not old residents as defined above and—

- (a) they have an Entry Permit. (This allows them to become residents of the territory); or
- (b) they have a Dependant's Pass; or
- (c) they have a Temporary Employment Pass; or
- (d) they have a Pupil's Pass; or

- (e) they enter the territory as visitors and later obtain permits to become residents.

PERSONS IN TRANSIT:

Persons entering or leaving the territory are classified as this if they have an In Transit Pass. These passes are issued when persons are passing through the territory to a destination outside it and are valid for a period of up to one month. This pass is not required for anyone who does not stay overnight in the territory, or crews of aircraft and ships. These are not recorded in the migration statistics. As from 1st July 1957 an In Transit Pass is valid for only two weeks.

VISITORS:

Persons classified thus are those who have—

- (a) a Visitor's Pass; or
- (b) a Special Pass.

Visitors Passes are valid for up to six months and allow the visitor to pursue temporarily his business or profession as well as covering holiday visits. Special Passes are valid for up to two months and cover a number of short emergency visits as well as cases where further investigation has to be made before another pass is issued. Certain people who enter as visitors later obtain permits which allow them to become residents. These are then required to fill in a further immigration schedule and statistics of the change overs to new permanent immigrants are produced.

A permanent emigrant is defined as a person who has resided in the territory concerned (other than as a visitor or person in transit) and who on departure states that he is leaving permanently.

Indigenous Africans are not obliged to fill in migration forms, so the short-distance movement of natives to and from neighbouring territories is not covered by the statistics. Thus the number of Africans covered is very small, and refers largely to sea and air travellers from further afield.

Owing to the introduction of new migration schedules it was difficult to provide statistics of visitors and total migrants for Kenya for 1950 onwards in a form strictly comparable with those for previous years. The relatively small numbers of visitors to East Africa who entered Kenya from one of the other East Africa High Commission Territories or Zanzibar are included in the statistics for the years before 1949, but not subsequently.

Note.—The length of visit is given as the mid-point of a range except where it is in weeks. Thus "2 months" stands for 11/2 to 21/2 months.

EXTERNAL AND INTERTERRITORIAL TRADE

Historical Note

1. In the valuation of East African trade it must always be remembered that valuation is at the point of entry or exit. When looking at East Africa as a whole, this makes no difference, but when studying the trading position of each territory, it results in Uganda's exports being over-valued and her imports under-valued; the same applies to a considerable volume of trade conducted by the northern provinces of Tanganyika, which almost exclusively make use of the port of Mombasa. The result is an inflation of the balance of trade, the figures in Annual Trade Reports for many years being biased in Uganda's and Tanganyika's favour. An accurate statistical picture, were such an exercise worth doing, would show a different story. It should also be noted that into Kenya's statistics of external trade are added many of the imports used on an East African basis, whether by public utilities, headquarters of industrial and commercial concerns, hotels, or other organisations.

2. Prior to 1949, when the customs of Kenya, Uganda and Tanganyika were unified, Annual Trade Reports were prepared for Kenya and Uganda as a single unit and Tanganyika as a separate unit. Trading between the two separate units was treated on the basis of foreign trade.

3. From 1949, all trade was valued at the point of entry into or exit from East Africa and credited to the territory to or from which the goods were consigned.

4. From 1950 to 1955, imports have been recorded on a "NET IMPORTS" basis, which allows for adjustments of transfers of imported goods from one East African territory to another, so that the final territory of destination is shown as the importing territory. Furthermore, the transfer of local produce and manufactures between the three territories has been excluded from the external trade statistics from that year.

5. In order to speed up the production and allow for the expansion of the East African Monthly Trade and Revenue Reports, from 1956, imports have been recorded on a "DIRECT IMPORTS" basis (see definition 2 below). It is not possible, therefore, to compare 1956 and later countrywise data with earlier years for territorial imports, but "NET IMPORTS" totals by individual articles have been made available in order to allow for comparison back to 1950.

Notes and Definitions

1. **Net Imports.**—Imports received direct from countries outside East Africa, *plus* imported goods transferred from Uganda/Tanganyika, *minus* imported goods transferred to Uganda/Tanganyika. This basis produces negative quantities and values in certain instances (*see* note 18 below).

2. **Direct Imports.**—i.e. goods entered at the time of importation for consumption or *warehousing* in the East African territories, including, in both cases, goods which are subsequently re-exported. Goods warehoused at the Port of Mombasa on behalf of Uganda and the Northern Province of Tanganyika are recorded as "DIRECT IMPORTS" of Kenya.

3. **Re-exports.**—Imported goods subsequently re-exported without change of form to countries outside the East African territories or re-exported as aircraft and ships' stores.

4. **Domestic Exports.**—Kenya produce and manufactures exported to countries outside the East African territories or as aircraft and ships' stores.

5. **Retained Imports.**—Net imports, minus re-exports.

6. **Transfers.**—Goods originating from outside the East African territories which are consigned from one East African territory to another. These transactions are *not* included in re-exports, but, as stated in the historical note (4) above, result in the presentation of imports on a "NET IMPORTS" basis.

7. **Interterritorial Trade.**—The exchange of local produce and manufactures between the three East African territories only. The details for this type of trading can be regarded as approximate only, due to the long lines of communication and the small number of customs posts. Included in the value of goods entering this trade is the customs duty on excisable commodities and imports duty on imported raw materials used in locally manufactured products. The value is thus overstated for many items.

8. Values.—

(a) *Imports:* Imports are valued at the point of entry into Kenya. The value includes cost, insurance, freight and any commission except buying commission up to five per cent and *excludes* customs duty and any landing charges payable within Kenya.

(b) *Re-exports and Domestic Exports:* Valued free on board ship or aircraft. The amount of any Kenya levy, cess or export tax to which goods are liable is *included* in the value.

9. **Specie and Currency Notes.**—Included at their intrinsic value as base metals and paper respectively.

10. **Gold.**—Import and export values of gold are *included* in the external trade statistics.

11. **Country of Origin.**—The country in which the goods were grown or produced; in the case of manufactured goods, the country in which the manufacturing process was substantially completed. When the country of origin cannot be determined, the goods are shown as originating in the country from which they were consigned.

12. **Country of Destination.**—The country of final destination as far as can be ascertained at the time of export. If, however, the country of final destination is unknown, the country to which immediately exported is used.

13. **British Countries.**—All the countries of the Commonwealth including Protectorates, Mandated Territories and Condominions.

14. **Sterling Countries.**—All British countries and Burma, Eire, Iceland, Libya, Iraq and Jordan, but *excluding* Canada and Newfoundland and the Anglo-Egyptian Sudan (now the Sudanese Republic).

15. Government Imports and Exports.—Imports and exports made direct by Kenya Government Departments, East Africa High Commission Departments (including the Railways and Harbours and Posts and Telecommunications Administrations), the Colonial Development Corporation and Foreign Consular Services, when shown as destined for or originating from Kenya are *included* in all the tables in this publication. Details are separately recorded under each article of imports in the Annual Trade Reports. Naval, Military and N.A.A.F.I. (E.F.I.) imported stores (except goods imported by N.A.A.F.I. (E.F.I.) on which duty is collected) are *excluded*.

16. Aircraft and Ships' Stores.—Shown as a separate item in domestic exports and re-exports. Details are recorded under each commodity of exports in the Annual Trade Reports.

17. Parcel Post Imports.—Prior to 1st August, 1952, goods imported by parcel post and valued over £50 were shown under the respective articles of imports; those valued under £50 were allocated to a special parcel post category. Since 1st August, 1952, *all* imports by parcel post have fallen under the special category as they are not analysed by article. The quantity and value of specific articles of imports is therefore understated to the extent of trading by means of parcel post; this must particularly apply to cotton and silk piece goods. The value of overseas parcel post entries into Kenya for the years 1950-1956 was as under:—

1950: £0.4 million,		representing	1.1 %	of total net imports.
1951: £0.6 million,	„	1.2%	„ „ „	
1952: £2.4 million,	„	4.1%	„ „ „	
1953: £4.0 million,	„	7.8%	„ „ „	
1954: £5.4 million,	„	8.9%	„ „ „	
1955: £6.6 million,	„	9.2%	„ „ „	
1956: £5.5 million,	„	7.9%	„ „ „	

18. Negative Quantities and Values—Net Imports.—Are caused by the transfer, from one territory to another, of goods imported in a previous year or at a higher value than when originally imported.

19. External Trade Indices.—Notes on the method of compilation of the External Trade Indices are given in an introductory article in the March, 1954, issue of the "Quarterly Economic and Statistical Bulletin," published by the E.A. Statistical Department. Further information will be given on request.

20. Introduction to East Africa of the "Standard International Trade Classification".—With effect from 1st January, 1954, the new "Official Import and Export List" of the E.A. Customs and Excise Department, which is based on the "Standard International Trade Classification" approved by the United Nations and amended slightly to cater for specific East African needs, took the place of the local trade classifications previously in use. Comparisons in respect of certain individual articles for the years 1954/1955 and earlier years are therefore not always possible. Assistance in overcoming any difficulties experienced can be obtained from the E.A. Statistical Department.

21. Rounding to £'000.—In many instances throughout the trade tables, individual figures will not add to totals because of rounding to £'000.

22. More detailed definitions and notes relative to East African trade are to be found in the Annual Trade Reports of Kenya, Uganda and Tanganyika, published by the East African Customs and Excise Department.

[¶]See Note 5.

*Includes: certain materials for the production of food and also unmanufactured tobacco.

†Includes: feeding stuffs for animals; oilseeds and nuts; processed oils and fats; all aviation and motor spirit; all fuel oils, lubricating oils and greases.

‡Excludes: private motor cars, motor cycles, cycles and domestic appliances, furniture and fixtures; all of which are included under "Consumers' goods".

§Includes: private motor cars, motor cycles, cycles and tyres and tubes for same; domestic appliances including refrigerators, sewing machines, wireless sets and radiograms, wood and metal furniture and fixtures and other household utensils; all cotton and other piece goods; blankets; all articles of clothing and footwear.

§Includes: all imports by parcel post (which are not analysed by articles); livestock not for food; gold and silver.

PRODUCERS' CAPITAL GOODS—

(a) Industry:

Includes: railway rolling stock: rails, sleepers, track construction accessories and signalling apparatus; industrial and mining machinery of all types; hand and portable appliances, tools and implements; machine tools; engines of all types; apparatus for wireless, telegraph and telephone; insulated cables and wire for electricity; wire cables, ropes, fencing; etc.

²(b) Commerce:

Includes: buses, trucks, lorries, trailers and other road motor vehicles (complete) (except private); aircraft; accounting, book-keeping, calculating and other office machines (complete), including typewriters; safes and strong room fittings.

³(c) Agriculture:

Includes: agricultural tractors, machinery and appliances, hand tools and implements; milking machines, cream separators and other farm dairy equipment; barbed wire.

⁴(d) Other:

Includes: prefabricated buildings and their assembled parts; sanitary, plumbing, heating and lighting fixtures and fittings; scientific, medical, optical, measuring and controlling instruments and apparatus.

With the introduction to East Africa of the Standard International Trade Classification (as from 1st January, 1954), it has not been possible to continue to include the complete list of import articles used for the 1950-1953 calculations owing to changed classifications. As an indication, the following is the percentage value of total imports used in the calculations of this index:

1951-81%; 1952-79%; 1953-77%; 1954-66%; 1955-64%; 1956—64%.

in tables 54-57 inclusive, "Price" means "Unit Value."

TRANSPORT AND COMMUNICATIONS

Notes and Definitions

1. East African Railways and Harbours.—

General statistics relative to Kenya, Uganda and Tanganyika on a territorial basis are available up to 1950 only, for, as from 1st January, 1951, the Administration adopted the principle of operating the system on an East African basis.

2. Shipping.—

- (a) Details of entry only have been given in this publication.
- (b) Statistics relate to both steam and sailing ships engaged in international or coastwise trade, arriving either with cargo or in ballast. A tug with lighters in tow is counted as a single steamship with a tonnage equal to the combined tonnage of the tug plus the lighters. Naval craft are *not* included.
- (c) Returns are received from the following Kenya ports, each call at a port being counted separately:—
MOMBASA: MALINDI: LAMU: KIPINI: KILIFI: FUNZI and SHIMONI.

3. Air Traffic.—

- (a) From 1952, statistics include all commercial aircraft using Nairobi (Eastleigh), Nairobi West and Mombasa airports.
- (b) R.A.F., Military, Police, training, testing and private aircraft movements are *not* recorded.
- (c) Total number of passengers handled is the number embarking and disembarking, including transit passengers twice,
- (d) Passengers in transit are those continuing their journey in the same aircraft.
- (e) Passengers landing or embarking are mainly those completing or commencing their journey, but the statistics do include a small number changing aircraft or staying over for a few days.
- (f) Freight handled is the weight of freight and mail unloaded from or loaded into aircraft. It does not include aircraft fuel or stores or goods remaining in the aircraft.
- (g) *Movements*: Each touch-down and take-off is counted as a separate movement.
- (h) Tables 78 and 79 are not comparable with table 77.
- (i) Tables 78 and 79 *exclude* passengers and freight in transit and internal air traffic within East African Territories, and to Zanzibar.
- (k) For the purpose of direction of air traffic, countries of origin and destination have been grouped into regions, in order to avoid disclosing the operations of individual companies. The countries included in each region are as follows:—
 - (1) *United Kingdom*—includes Eire.
 - (2) *Continental Europe*—Belgium, Bulgaria, Czechoslovakia, Denmark, Finland, France, Germany, Greece, Hungary, Italy, Luxemburg, Netherlands, Norway, Poland, Portugal, Rumania, Spain, Sweden, Switzerland, U.S.S.R., Yugoslavia.
 - (3) *Middle East*—Cyprus, Egypt, Iran, Iraq, Israel. Lebanon, Syria, Turkey.
 - (4) *Arabian Peninsula, Pakistan and India*—Aden, Bahrein, Ceylon. India, Kuwait, Oman, Pakistan, Saudi Arabia, Yemen.
 - (5) *Africa North of the Equator (excluding Egypt)*—Algeria, Eritrea, Ethiopia, French Equatorial Africa, Libya, Morocco, Somaliland, Sudan, West Africa, Tunis.
 - (6) *Africa South of the Equator and adjoining Islands* Angola. Belgian Congo, Federation of Rhodesia and Nyasaland, Madagascar, Mauritius, Mozambique, Reunion, Union of South Africa.
- (1) 1 Kilogram = 2.205 lb.: 1,000 Kilograms = 2,205 lb. 1 Metric Ton.

4. Roads.—

No early data has been quoted because owing to the lack of information recorded, comparisons of current data with earlier published figures would only be misleading.

5. Motor and Other Road Vehicles.—

- (a) Detailed analyses of motor and other road vehicles by type, make, horse power, cubic capacity, carrying capacity and method of propulsion are available in the Kenya Inland Revenue Department's published quarterly and annual statistics from 1950 onwards.
- (6) For Kenya, all Government owned vehicles are *included*, but military owned vehicles are *excluded* from the statistics.

6. Posts and Telecommunications.—

Since the introduction in 1949 of a unified East African service, only certain statistical series relative to the separate territories have been retained and, as far as possible, details relative to Kenya only have been shown in this publication. Other data has had to be shown on an East African basis.

7. In certain of the tables published under the heading of "Transport and Communications", individual figures will not necessarily add to totals because of rounding.

AGRICULTURE

Notes and Definitions

The quantities of agricultural production and exports have been translated from bags, centals, etc., into tons to facilitate comparisons. For the same reason price units have been made uniform in each table.

Data on non-African agriculture are relatively accurate and comprehensive. For the main crops, statistics of production are available, compiled from statutory returns completed by farmers or from deliveries to the various controlling Boards. Prices for some farm produce are guaranteed by Government and for others there is an average payout to producers based on the total receipts of the relevant Board or Control. There are no statistics of total production of African grown crops.

Tables 94, 95 and 106 to 111, as well as certain figures for recent years in tables 98 and 100, are derived from the annual Agricultural Census of non-African farms. This census covers the Highlands and Asian Settled Area of the Colony but excludes farms in Coast Province. This omission has very little effect on the coverage of stock and cereal farming and, with the important exceptions of sisal and sugar, none at all on that of the plantation crops shown in the tables.

Exports

Prior to the amalgamation of the Customs Departments of the three East African territories, goods which were sent abroad **by** one territory via another territory were shown at their amounts and values as emported to the "in transit" territory. This applied in particular to goods from Tanganyika which were sent abroad via Kenya or Uganda. From 1949 onwards, however, all exports abroad were recorded at the port of loading in East Africa. It was necessary therefore to make the exports for the period 1938-1948 comparable with those for the year 1949 and onwards. This has been achieved by studying from the Annual Trade Reports the Kenya and Uganda imports and re-exports of Tanganyika produce and allocating the commodities, whenever possible, to the producing territory as they left East Africa. A similar procedure has been adopted for Kenya and Uganda produce imported into and re-exported from Tanganyika Territory. In certain cases, approximations have had to be made but in all instances the maximum error **which** will be caused by this is small. The export tables exclude interterritorial transfers which, for some produce, are large.

Sources: Board of Agriculture; Coffee Board of Kenya; Kenya Sisal Growers' Association; Pyrethrum Board of Kenya.

*These statistics are shown against the year in which the crop was planted and prices include the price of the bag.

†Average pay-out. The 1954.55 values are before deduction of export tax.

‡Average f.o.b. price for exports, all grades of sisal fibre but excluding tow.

§ From 1946 the prices are as guaranteed for best grade grains. For 1938 the average pool pay-out best grains is given.

¶ From 1946 the prices are as guaranteed for the best grade grain and include, for the years 1946, an estimates of the average value of acreage grants and bonuses and for the years 1949 and 1950, subsidies of 2/40 and 4/00 per 200 lb. respectively. For 1938 the average pool pay out for all grains is given and thus this figure is not strictly comparable.

|| The grading system was changed in 1949. For this and subsequent years the price is for flowers with 1.5% pyrethrin content.

FORESTRY

Notes and Definitions

The tables cover licensed timber cutting (excluding fuel) from forest reserves and public lands. Timber cut from private land is not included since reliable statistics are not available. This is only a small proportion of total production, and a very small amount of timber which is issued free is omitted from the totals. The factor 1 -27 is used for converting production in hoppus cubic feet to round timber true volume.

Exports retained in the other East African territories are excluded from the export values. "Timber" is defined as logs, rough hewn or not, or sawn lengthwise or squared. Firewood, poles and railway sleepers are excluded.

NOTE.—Production in round timber true volume.

AREAS OF AGRICULTURE AND INDUSTRY

MINING

Notes and Definitions

Kenya statistics of mineral production are compiled from returns made by mining concerns. For salt and lime commercial output only is covered, but considerable quantities of these items which are mined and used on farms, etc., are not recorded. The values given for gold, lime, kyanite and diatomite are the gross amounts realised by the producers. The production of limestone and gypsum excludes that used as material in the production of local cement.

†Estimated.

§Carbonic acid gas.

FUEL AND POWER

Electricity.—For the period prior to the second quarter of 1948, sales of the East African Power and Lighting Company are given. This company held, until then, a monopoly for the public sale of electricity, but as from that quarter a small amount has been sold by the Kenya Government in the Nyeri area. Electric power has been exported by land line from Tanganyika to Kenya since 1949, and is included in the sales at Mombasa.

Lubricants.—Aviation lubricants include oils and greases, in thousand gallons. Railway oils are those sold on contract, e.g. action, motion and steam cylinder oils.

COMMERCE AND INDUSTRY

Notes and Definitions

Company Statistics

Statistics of local companies registered include businesses, already in existence, which are converted into companies of limited liability, while the details of new nominal capital created in a year include capital increases by existing limited liability companies through rights, bonus issues, etc.

Statistics of foreign companies provide details of those companies which are registered outside Kenya but which maintain a place of business in Kenya. The nominal capital of foreign companies is not shown since the total registered capital of these companies gives no indication of the amount of capital they have invested in Kenya.

Bankruptcy statistics do not include companies, winding up under the Official Receiver.

Industrial Production

Statistics for the 1954 survey of industrial production relate only to establishments giving employment to five or more persons. The response of firms to the questionnaire sent to them was less than 100 per cent, but estimates of the costs and output of these non-responding firms are included in the statistics given.

The term "approximate net output" means the value added to the national product by industry and is obtained by subtracting the cost of materials, fuel and work given out from the value of gross production.

BUILDING

BUILDINGS COMPLETED FOR PRIVATE OWNERSHIP

NAIROBI

MOMBASA

BUILDING

Notes and Definitions

Statistics of private building are compiled from returns received from owners of new buildings and extensions completed in the following towns:

Nairobi. Mombasa. Kisumu. Nakuru. Eldoret. Kitale.

Building outside the city or municipal boundaries is not included.

The term "extensions" includes all alterations and additions to buildings. Extensions are included with the new buildings statistics prior to 1950, but from 1950 onwards they are excluded and their estimated total cost only is shown separately.

Commencing in 1953 buildings which are partly residential and partly non-residential have been allocated under the "number of buildings" according to their main purpose. Previously such buildings were classified as non-residential. Floor area has been divided between residential and non-residential throughout.

A block of flats is counted as a single building.

Floor area is defined as plinth area together with the floor area of any external ancillaries such as garages, servants' quarters, store rooms, lavatories, etc.

CURRENCY AND BANKING

Notes and Definitions.

Currency.—East African Currency circulates in Kenya, Tanganyika, Uganda, Zanzibar, British Somaliland and the Aden Protectorate. The standard coin is one Shilling E.A. = 100 cents. This is exchanged in London at the rate of 20/- E.A. for £1 sterling subject to a maximum premium of 1/2 per cent on transfers. Currency notes are used for denominations of 5/- and over, silver or cupro-nickel for 1/- and 50 cents pieces and copper for lower denominations. The currency is supervised by the East African Currency Board established in London. The shilling currency was introduced in Kenya, Tanganyika and Uganda in 1922, in Zanzibar in 1935, in Somalia, Eritrea, British Somaliland and Ethiopia at various dates subsequent to August, 1941 and was withdrawn from Ethiopia, Eritrea and Somalia during 1949 and 1950. In October, 1951 it was made legal tender in the Aden Protectorate.

Commercial Banking.—The different categories of deposits are defined as follows:

Demand: subject to transfer or cashing by cheque.

Time: usually not subject to transfer by cheque and lodged for a definite period subject to notice of withdrawal.

Saving: lodged for no fixed period of time, and not subject to transfer by cheque.

The Kenya Land Bank was established in 1931. Its main function is to provide financial assistance against security to farmers on long term for purchasing land, discharging existing mortgages, making permanent improvements, buying livestock, seed or agricultural equipment, or on short term for meeting the cost of farming operations or minor improvements. Long term loans may be up to a maximum of £5,000 or up to 60 per cent of the value of the land and are repayable in not more than 30 years.

Under the heading "Loans Reverted to Land Bank on Foreclosure" (Table 145) positive amounts represent farm properties taken over by the Land Bank, and negative amounts arise from the sale under agreement of these properties. A farm property taken over diminishes the balance of loans outstanding, and a farm property sold under agreement increases it.

KENYA GOVERNMENT—COLONY ACCOUNT

REVENUE AND EXPENDITURE

PUBLIC FINANCE

Notes and Definitions

The form in which Government accounts are kept and published is determined by the administrative structure and by the requirements of financial control. For some purposes this form does not present the clearest picture and it is convenient to rearrange the accounts on a "functional basis" so that the service or section of the economy upon which money is spent, and the way in which the Government gets its money, can be clearly seen.

The accounts given in this Abstract are arranged on a functional basis.

Government expenditure in Kenya is controlled through two main accounts, the Colony Account and the Development Account. It is possible to describe the Development Account as the capital account of the Colony, but to do so would not be quite correct, for the Development Account includes items not of a capital nature and the Colony Account contains items which are of that nature. The distinction between the two accounts is not related to any separation of capital and current transactions but in general to whether a particular project is included in the Development Plan. The expenditure of the Colony Account and of the Development Account must be taken together in order to see the full extent of Government spending, care being taken to see that transfers from the Colony Account to the Development Account are not counted twice.

Emergency Expenditure

This item does not represent the whole cost of the Emergency, for expenditure on the Emergency is mostly paid from a fund which was set up in order that urgent expenditure could be made speedily and at the same time be controlled from the Treasury. The sums quoted under this head in the following tables represent contributions to the Emergency Fund while there are other expenditures attributable to the Emergency, provision for which is made through the estimates in the usual way.

Development Fund Revenue and Expenditure

The total payments into and out of the Development Account invariably do not even approximately balance in any one year. It is therefore more appropriate to consider cumulative tables, but even totals cumulative to a particular point do not necessarily balance. The difference, whether positive or negative, is reflected in the Colony's assets and liabilities.

*Preliminary Estimates.

GEOGRAPHICAL INCOME AND NET PRODUCT

NAIROBI

COST OF LIVING (EXCLUDING RENT)

(Base—1939 = 100)

RETAIL PRICES AND COST OF LIVING

Notes and Definitions

The Nairobi cost of living index (excluding rent) measures, with a base August, 1939, the cost of maintaining a standard of living prevailing among European Government servants with a basic salary of less than £500 per annum in 1947. The weights used were based on a family budget survey carried out at that time.

Prices are collected from 84 representative dealers for 200 articles.

The weights used for this index are as follows:

	Weight		Weight
(1) Food, Drink and Tobacco	43	(5) Papers and Periodicals	1
(2) Household	11	(6) Wages	13
(3) Pharmaceutical Products	3	(7) Transport	11
(4) Clothing and Footwear	10	(8) Amusements	3
		(9) Miscellaneous	5

The weights adopted in the food, drink and tobacco group are set out below. The items in the food, drink and tobacco group number 42.

	Weight		Weight
(1) Groceries	24	(5) Fruits	7
(2) Meat and Fish	18	(6) Vegetables	6
(3) Dairy Produce	14	(7) Beverages and Tobacco	25
(4) Bakery	6		

The wage adjustment index is a recalculation of cost of living index as shown in Table 151, excluding all increases in duties on alcohol and tobacco since August, 1939. As the alcoholic beverages and tobacco group has a weight of ten in the cost of living index the removal of increases due to duty changes has a considerable effect on the movement of this index.

EMPLOYMENT AND EARNINGS

Source

The Annual Enumeration of Employees, carried out by the East African Statistical Department in co-operation with the Labour Department, Kenya. This enumeration took place on the 30th November each year, up to and including 1955, and on the 30th June, 1956

Note and Definitions

- 1 *Public Services* include Kenya Government, High Commission (Kenya only), E.A. Railways and Harbours (Kenya only), E.A. Posts and Telecommunications (Kenya only), Defence (civilians only), Local Governments and African District Councils.
- 2 Private employers engaged in several activities were asked to state their main activity, and this was the basis of industrial classification. Agricultural and domestic employers are included under the general heading of "*Private Employment*," unless shown separately.
- 3 In Private Employment, "*Other Services*" includes domestic service, education, medical and health, religious, legal and business, community and personal services.
- 4 Overtime the coverage has improved, particularly in 1954 and 1955, and therefore the figures are not always strictly comparable.
- 5 *Employment Figures* include all apprentices and part-time workers, but exclude directors and partners without basic salary.
- 6 *Earnings or Wages* cover all cash payments, including basic salary, cost of living allowances, profit bonus, together with the value of rations and free board, and an estimate of the employer's contribution towards housing. Non-cash benefits such as retirement benefits and passage assistance are excluded.
- 7 The *Annual Wage Bill* is an estimate from monthly data. The reported earnings for the month are multiplied by twelve.
- 8 All tables of numbers are rounded to the nearest hundred, and wages bills to the nearest £100,000.

PUBLIC HEALTH

Notes and Definitions

The statistical table giving the number of doctors and dentists in Kenya (Table 180) must be read with caution. Because there is a single fee for registration, and no annual licence, the register may include a number of doctors who do not practice or who have left the country. Thus in 1953, the number of doctors in Kenya appears to have fallen from 700 to 480, and dentists from 60 to 30. This was due entirely to the removal from the register of a number of names.

The statistics of diseases and deaths reported in Government hospitals must also be read with caution. The bare statistics imply that relatively little progress is being made. In fact, the increased availability of services is maintaining the figures and obscuring the real progress which is taking place. Apart from increased services, the population is increasing and transport facilities have improved. Since 1946 the number of mortalities per 1,000 in-patients has apparently increased. The reason appears to be that improved transport now permits an increasing number of very serious cases to enter the hospitals, which previously would never have reached a hospital.

REGISTERED MEDICAL PRACTITIONERS, DENTISTS, PHARMACISTS, NURSES AND MIDWIVES

EMERGENCY

A State of Emergency, to deal with the *Mau Mau* uprisings by the Kikuyu tribe, was declared on October 20th, 1952. Only about one fifth of the total African population of Kenya was affected and the terrorists were mainly confined to the Central Province and the eastern half of the Rift Valley Province, where the Kikuyu are mostly found. But the impact on the economy of Kenya was widespread, as can be seen by comparing figures for pre-Emergency and Emergency years in almost all the tables of this Abstract. By 1956 the rebellion was being brought well under control.

Expenditure on the Emergency is made from an "Emergency Fund" set up in 1952 to enable urgent needs to be met speedily while yet retaining Treasury control.

EMERGENCY FUND		
Table 203	£	
Year	Contributions from Revenue	Expenditure from Fund
1952	750,000	271,277
1953	3,000,000	4,352,011
Jan./June, 1954	8,500,000	6,731,006
1954/55	16,000,000	15,552,176
1955/56	14,000,000	15,021,941
1956/57	8,000,000	8,000,000*
1957/58	4,400,000	4,400,000*
	54,650,000	54,328,411

Source: Appropriation Accounts and Colony Estimates.

QThere are no published estimates of the expenditure from the Fund in 1956/57 and 1957/58 and it is assumed that they will be approximately equal to the contributions from revenue in those years.

The Fund has had other miscellaneous revenues which up to 30th June, 1956 amounted to £313,624 at which time the balance remaining in the Fund was £635,213.
