

Statistical Release

**Revised Quarterly Gross
Domestic Product**

October 2014

Introduction

The Kenya National Bureau of Statistics initiated the process of rebasing and revising the National Accounts in 2010. This is the sixth major revision in the history of national accounts in the country. The main objectives of the revision were; to implement recommendations of 2008 System of National Accounts (2008 SNA), change base year from 2001 to 2009, and incorporate new sources of data that have become available since the previous major revision.

The revision process involved use of a wide range of information from surveys, censuses and administrative records done in a coherent and consistent manner to achieve the overall goal of improved National Accounts statistics. The revision has been finalized for key national accounts estimates while more work is ongoing with a view of expanding the accounts further.

As a result of the revision, a 2009 Supply and Use Tables (SUT) was developed as an integral part of the national accounts estimates. The Supply and Use Tables provides detailed information on the production processes, the interdependencies in production, the use of goods and services and the generation of income in production. The 2009 SUT was published in the Economic Survey 2014. Other output of this revision includes revised annual and quarterly national accounts estimates for the period 2006 to 2013 at current and constant prices which were released on 30th September 2014.

The revised national accounts are generally in accordance with 2008 SNA guideline though there are some departures. It has not been possible to include coverage of illegal activities as recommended by the SNA due to unavailability of data. Furthermore, it has not been possible to measure expenditure on computer software and database and entertainment, literary and artistic originals, which is defined as capital expenditure.

Rationale for revision and rebasing of NAS

National accounts are a set of macroeconomic statistics which are key in understanding the workings of an economy and crucial for macroeconomic analysis and decision taking. They provide information on the economic transactions between different economic agents in an economy and also with the rest of the world and are also used for international comparability. Frequent revisions of NAS is therefore an internationally recommended best practice that is undertaken in many countries. The reasons for this are varied and include; changes in relative prices, structural changes in the economy, new compilation methods, and emergence of new or improved data sources.

Highlights of the Results of Revision and Rebasing

For the 2009, the revised GDP is 20.5 percent higher than previously estimated while for the other years between 2006 and 2013, the gap between the revised GDP gradually increases from 15 to 25 per cent. Broadly, the major reason that led to the upward revision of the GDP include use of better data, improved coverage and revised input-output production structures which were lower in a number of sectors compared to the revised estimates. In terms of data improvement, the 2009 Population Census; Kenya Integrated Household Budget Survey (KIHBS) of 2005/06; and 2010 Census of Industrial Production majorly contributed to the upward revisions.

Classification of Economic Activities

The revised national accounts are now based on International Standard Industrial Classification of All Economic Activities revision 4 (ISIC Rev 4). The ISIC allocates the statistical units in the classes where they have their main (principal) economic activity. The correspondence of the previous economic classification (ISIC Rev 3.1) and the new classification (ISIC Rev 4) for national accounts is as shown in Figure 1.

Figure 1: High-level concordance

In some cases, economic activities have been grouped together at the reporting level for the quarterly GDP e.g. "Electricity, gas, steam and air conditioning supply" and "Water supply; sewerage, waste management and remediation activities" are in different category (section) of the ISIC Rev 4, but have been grouped together for the purposes of reporting quarterly GDP.

Preliminary QGDP estimates by economic activity

The indicators used for quarterly national accounts have been revised in line with ISIC rev 4. They include both current and constant price estimates that have been aligned to the revised annual estimates. A back series for both estimates is provided from the first quarter 2009. Further refinements of the preliminary estimates provided in this report are expected in subsequent publications.

Overview of Second Quarter GDP

The provisional estimates of Gross Domestic Product (GDP) show that the country's economy expanded by 5.8 per cent during the second quarter of 2014 compared to 7.2 per cent recorded during a similar quarter of 2013. The growth was mainly supported by robust growths in; construction (18.9 per cent), manufacturing (9.1 per cent) financial & insurance (8.3 per cent); information and communication (6.4 per cent); and wholesale and retail trade (6.8 per cent).

Balance of Payments

The country's merchandise trade statistics are shown in Table 5. Merchandise trade deficit widened from KSh 204,593 million in the second quarter of 2013 to KSh 262,431 million in the same quarter of 2014. The widening of trade balance could be attributed to increase in the import expenditure. The import bill increased by 22.5 per cent to KSh 403,453 million in the second quarter of 2014, up from KSh 329,426 million recorded in the corresponding period of 2013. This was mainly on account of increased imports of fuel and lubricants in the quarter under review. The value total exports increased by 13.0 per cent from KSh 124,833 million in the second quarter of 2013 to KSh 141,022 in the quarter under review.

During the quarter under review, the current account deficit worsened by 49.5 per cent to KSh 142,531 million as indicated in Table 4. Trade in international services increased by 8.0 per cent from a surplus of KSh 50,160 million in the second quarter of 2013 to a surplus KSh 54,148 million in the quarter under review. The overall balance of payments position improved significantly from a surplus of KSh 47,864

million in the second quarter of 2013 to a surplus of KSh 165,822 million during the quarter under review. The improvement was mainly as a result of the build-up in foreign exchange reserves during the period under review, which was largely attributed to proceeds from the sale of the Eurobond in June 2014. The Kenya Shilling depreciated against the US Dollar to exchange at an average of KSh 87.61 per US Dollar in June 2014, compared to an average of KSh 85.49 per US Dollar in June 2013.

Current transfer receipts increased by 59.6 per cent from KSh 60,293 million during the second quarter of 2013 to KSh 96,209 million in the second quarter of 2014. Personal transfers posted an increase of 14.3 per cent to record KSh 30,460 million during the second quarter of 2014. Net inflows in the capital and financial account increased by 25.7 per cent to a surplus of 93,959 million in the second quarter of 2014 compared to a surplus of KSh 74,767 million recorded in a similar period of 2013. The increase was largely in the financial account attributable to long term capital inflows from the sale of the Euro bond in June 2014. Gross reserves increased by 34.1 per cent from KSh 679,458 million in the second quarter of 2013 to KSh 911,209 million in the second quarter of 2014.
